Flanged Bearings & Different Bearing Types | NMBFlanged bearings are most commonly used when the application requires the bearing to be locked in place. A flanged bearing is used in this instance to help withstand axial thrusting. If there is any axial load or axial push on the bearing, the flange will prevent the bearing from moving axiallyTypes of Bearing Classifications and How They WorkThis article explains how bearings works and offers a general overview of the They are used as take-up devices on the ends of conveyors and as flanged units a ball bearing and might do the same where high axial loads are anticipated
